

ŠKODA CARS ALERT OTHER DRIVERS TO HAZARDS

ANONYMISED DATA SHARING IMPROVES ROAD SAFETY AND WARNS OTHER DRIVERS OF POTENTIAL DANGERS

WEATHER WARNING!

The system uses available data on the changes in temperature or risks related to bad weather and identifies dangerous sections accurately and in real time.

SLIPPERY ROAD!

Anonymised data directly from cars, such as the intervention of the ESP or ABS systems, can warn passing drivers of slippery roads in advance.

TAILBACK OVER THE HORIZON!

Data from traffic information, the traffic density monitoring system and other cars can improve the accuracy of the data on a tailback that is starting on a blind section.

POOR ROAD SURFACE AHEAD!

Drivers are also notified when entering the area of a poor road surface, dangerous sections and the risk of a puncture.
